WAR PRODUCTION BOARD
WASHINGTON, D. C.
Revised May 1, 1942
1. A WAR MESSAGE

War is upon us.

Our armed forces are engaged at sea, on land, and in the air, waging war with courage and faith in the cause of freedom—as well as with guns and ships and planes.

Labor must meet the challenge with similar courage and faith and by supplying more guns and more ships and more planes in a steady, ever-increasing flow until the war is won.

Already, in defense of our shores, the guns you have made and the planes you have built and the ships you have launched are blasting the foe. Our victory depends on greater and yet greater production from the workshops of democracy.

Today soldiers, sailors, airmen, and industrial workers share the front line of battle. Our fighting forces rely upon your skill and your energy for the implements of war. The workers of this Nation will prove that free Americans can outproduce, as they can outfight, any combination of slave peoples.

Ours is a sacred task to which we must consecrate mind and heart and hand. We will have to do the best possible job—on the assembly line, in the pit, at the throttle.

This is war—a people's war—a war of the common man against old tyrannies and new barbarisms.

Labor is more united than ever before in this great war undertaking. All labor has pledged its fullest cooperation and participation.

Ours is a labor movement unswerving in its devotion to the aims of freedom and in its determination to keep America strong and free.

Joined in this high purpose, labor can help not only to crush the Axis aggressors but also to build a new world of peace and security.

The time is now.
Democracy's destiny is in the balance.
Labor will never fail the cause of freedom.

Special Assistant to the President on Labor Matters.
2. LABOR ENLISTS

The Response to Pearl Harbor

American labor has responded quickly, enthusiastically, and virtually unanimously to the country's war needs.

Within a few minutes after the first Japanese bombs fell on Pearl Harbor on December 7, the leaders of labor began flooding Washington with offers of help in prosecuting the conflict that had been thrust upon us.

Ten million union members, through the American Federation of Labor and the Congress of Industrial Organizations, immediately announced formal support of the war effort and thereafter joined in a pledge to prevent all strikes and other stoppages which might impede the production of war munitions and materials. Thousands of local AFL and CIO unions as well as many unaffiliated groups of workers also volunteered immediate support.

Unity for Victory

Leaders in organized labor who had bitterly opposed some phases of the Administration's foreign and domestic program prior to December 7 joined unhesitatingly with other factions of a divided labor movement in the labor peace conference which the President convened on December 18. Out of this joint labor-management meeting there developed on December 23 a unanimous agreement that:

1. There shall be no strikes or lockouts.
2. All disputes shall be settled by peaceful means.
3. The President shall set up a proper War Labor Board to handle these disputes.

In Connecticut, the warring AFL and CIO leaders joined in a pledge of all-out aid and "no cessation of work or production during the war emergency." This declaration, wired to President Roosevelt, said, "Whatever sacrifices are necessary for the final victory will be made."
In California, the CIO, AFL, and independent railroad brotherhoods joined in a statement urging “Unity for Victory” as labor’s slogan, and recommending “that all factional, partisan, and political differences be immediately forgotten and that all labor organizations unite to win the war.”

In the great steel center of Gary, Ind., the CIO’s Steel Workers Organizing Committee, representing 35,000 workers in that area, pledged “100 percent cooperation to our Government and [we] offer our services in any capacity the Government sees fit to use us in.” AFL unions at Gary called a special meeting to plan ways to unify AFL and CIO war efforts.

The AFL Automobile Workers Union at its convention in Cincinnati approved the President’s foreign policy, endorsed the Atlantic Charter drafted by President Roosevelt and Prime Minister Churchill, and called for its amendment to provide for labor representation by every nation at the peace table after the war.

**No Stoppages of War Production**

President William Green of the AFL summoned officials of more than 100 affiliated international unions to meet in Washington on December 15, and this meeting, together with the AFL’s Executive Council, reaffirmed “loyalty to the principles underlying our Government” and pledged “to the President, to the Congress, and to the people undivided support for the most vigorous and rigorous prosecution of this war until final victory is ours.”

The AFL repeated the pledge it made in the first World War “that every stoppage of work essential to adequate national defense be avoided and averted.” The statement

“We have not been stunned. We have not been terrified or confused.”

*All quotations are from the President’s address to the Seventy-Seventh Congress, January 6, 1917.*
indicated willingness to accept temporary suspension if necessary of some labor protective laws for the period of the war and insisted on labor's right to be represented on special war boards which are to act on labor policies.

Organizations of Government employees affiliated with the AFL adopted a statement of wartime policy pledging against strikes and asserting that Government employees "have a special obligation of loyalty to the Government even more than that of the ordinary civilian."

The executive board of an aluminum workers union announced in Tennessee that it had canceled a strike vote by unanimous action.

On the day that the United States declared war, strikers withdrew pickets from a big powder plant at Ravenna, Ohio.

Mass meetings of unionists were held in many cities to declare against strikes and for increased production of munitions for the duration of the war.

Labor and management representatives of the great maritime industry met with the United States Maritime Commission and accepted a program forbidding wartime strikes and lockouts in the merchant marine.

The Building and Construction Trades Department of the AFL, a large proportion of whose members are engaged as artisans in the Government's 11-billion-dollar war construction program, held a meeting of the presidents of the various unions and thereafter announced to its membership: "There shall be no strikes for any reason whatsoever on defense construction projects."

"The militarists in Berlin and Tokyo started this war. But the massed, angered forces of common humanity will finish it."

---

3
Labor on the Firing Line

It was widely noted in the United States labor press that the construction unions had thousands of members actively "in the war" even before the United States declared war on December 8. "This is labor's war," many labor newspapers noted in reporting that the American Federation of Labor had 700 members at Midway, 400 at Guam, 10,000 in Hawaii, and 10,000 in the Philippines. Reports indicated that the construction workers at Midway and Guam joined actively with the United States Marines in combating the invading Japanese with available arms and munitions.

"We Are Ready to Serve"

President Philip Murray of the Congress of Industrial Organizations, immediately after the declaration of war, addressed the CIO's five million members over the radio with "an urgent message of the necessity for immediately enlisting the full cooperation of all elements in the production of weapons of war and other materials needed for the success of our national effort."

Murray said the CIO men in the war industries are saying to America: "Here we are, ready to serve our country. All we ask is that you let us use our energies and our brains to the utmost and listen to our constructive proposals for achieving all-out production."

On the same day, December 8, President Green of the AFL said in a statement:

Labor knows its duty. It will do its duty, and more. No new laws are necessary to prevent strikes. Labor will see to that. American workers will now produce as the workers of no other nation have ever produced and they will keep steadfastly on the job of supplying our armed forces with the munitions of war until victory and final peace are won.

Green also sent a cablegram to Sir Walter Citrine, secretary of the British Trades Union Congress, saying:

The stern logic of events has finally brought the democratic nations of the world together in a common cause. We must now stand together,
fight together, and suffer together until tyranny and totalitarianism are overthrown. This achievement must be realized at any cost. Be assured the workers of America will stand with the workers of Great Britain and their allies, immovable in their determination to carry on until all the Axis powers are definitely and completely defeated.

**Workers Urge 24-Hour, 7-Day Production**

Another great flood of labor support greeted the President’s request for operation of all war industries on a 24-hour-day, 7-day-week basis.

The war industries, most of which had already been working 2 and 3 shifts daily, proceeded immediately to reorganize themselves for unceasing production during all the 168 hours in a week. Hundreds of thousands of workers agreed to, and in many cases volunteered for, the overtime work that was necessary until the rotating “swing shift” could be put into operation.

In the automobile industry, which had more than 4 billion dollars in defense orders, the United Automobile Workers, CIO, sent telegrams to their managements urging that all defense operations be put on a 24-hour basis. “Production must increase,” this union said in a statement. “Every man among us able to do so must join the armed forces. Civilian defense must be strengthened from our ranks. War relief money must pour from our pockets. Any lagging, any failure to utilize every talent or strength toward inevitable victory must be regarded as criminal.

“We are partners now with the heroic soldiers and sailors of Britain, Russia, and China, as well as our own. We are deter-

“*Our own objectives are clear: The objective of smashing the militarism imposed by war lords upon their enslaved peoples—the objective of liberating the subjugated nations—the objective of establishing and securing freedom of speech, freedom of religion, freedom from want, and freedom from fear everywhere in the world.*
mined that the strength of labor shall be maintained and used in this fight to the uttermost. We are determined that none shall stand in the way."

A program of 7-day, 3-shift operation of the nation's copper, zinc, and lead mining capacity was recommended by the War Production Committee of the International Union of Mine, Mill, and Smelter Workers, CIO, to the Labor Division. Director Sidney Hillman laid this program before a joint conference of labor, management, and Government officials for action. It recommended the establishment of national and local committees on which Government, management, and labor will be represented to carry out continuous operation in these industries which for many years have operated on a 1-shift basis.

Walter P. Reuther, official of the CIO Automobile Workers Union, advanced a proposal that the big three automobile companies, General Motors, Ford, and Chrysler, pool their tank construction facilities, instead of having each company carry out its own operations. "In this way," Reuther said, "we can tool up for production in half the time now estimated, and once we are in production we can turn out three times as many tanks as are contemplated under present schedules."

Not at the Bench Alone

In New York and other cities, central labor union bodies took the lead in collecting blood from their members, in cooperation with the Red Cross and other organizations, to fill up the "blood banks" of the Army and Navy through mass donations.

Among the hundreds of international and local unions that responded electrically to the Victory Program, the International Ladies Garment Workers set one of the highest goals as their contribution to national security. The I.L.G.'s 300,000 members pledged themselves to buy $25,000,000 worth of defense bonds within 6 months. Each member is to contribute 2 weeks' pay, and those unable to purchase the bonds outright
will buy them on an installment plan by deducting not less than 5 percent of their salaries each week.

Joseph P. Ryan, president of the International Longshoremen's Association, said his members stood ready not only to work as hard as is necessary but also to protect the waterfront from acts of sabotage.

**Americans All**

Local Union 51 of the Amalgamated Clothing Workers Union, describing themselves as "organized Italo-Americans of Baltimore City," formally expressed "appreciation of this land of the free which so generously opened its doors to us immigrants in search of bread and work," and proudly affirmed "we are Americans above all."

Frank Dutto, president of New York Local No. 1 of the Bakers and Confectionery Workers Union, whose membership is largely German-American, pledged "unqualified support of the union's leadership to President Roosevelt."

**The Labor Press**

Editorials in the labor union newspapers and magazines were marked by pungent phrasing as well as unanimity of opinion.

*Labor*, the journal of the railroad brotherhoods, quoted Thomas C. Cashen, chairman of the Railway Labor Executives Association, as follows:

The railroad workers of America will keep the wheels of transportation turning with unparalleled speed and efficiency during every minute and hour of this war until victory. Railroad workers favor a moratorium on talk so that all may become as one in defense of liberties which are more precious than life itself.

*Advance*, the newspaper of the Amalgamated Clothing Workers Union, said:

Labor must place voluntary restraint upon its historic right to strike and exhaust every possible avenue of conciliation and arbitration. It must avoid hasty action, for victory in the field of production is the first essential to victory on the battlefield.
The Kansas Labor Weekly said:

The skulking attack on our great democracy by the treacherous Japanese barbarian dictators calls for only one thing—and that is 100 percent unity to show these dictators that our way of life is ours and that we will fight to retain our possession. Organized labor is democracy itself. Whatever differences may have been in the ranks of organized labor, those differences must and will be laid aside and 100 percent cooperation and coordination is the watchword.

The Brewery Workers pledged its support:

We pledge ourselves, as loyal Americans and as members of the great body of organized labor in this country, to join to the fullest extent with our fellow Americans to assure the ultimate and total defeat of our enemies. There can be no division in our ranks.

The Colorado Labor Advocate said:

It is a privilege to work and sweat and sacrifice for America. It is an honor to help in the fight against the miserable enemies of our freedom. Let our slogan be: AFL workers will do their duty—ten times over—to smash Japan!

The Labor Herald of Richmond, Virginia, summarized labor's attitude:

Organized labor was among the first to sink its ambitions and announce its eagerness to drop every issue within our country and do everything possible to demolish an enemy without. Organized labor is behind our President; organized labor is behind total defense; organized labor and the American people will be before the enemy when he goes down to ignominious defeat. But when that time comes, and it will come, never forget December 7, 1941.

Out on the plains, The Wyoming Labor Journal said:

American labor in this war has a responsibility greater than has ever rested upon it. That responsibility is the production of the tremendous quantity of munitions of all kinds fundamental to victory. That labor will do its utmost goes without saying. They will make good as Americans always have in time of trial.

It would be impossible to quote from all of the labor papers, but every paper received after the attack on Pearl Harbor has joined with great vigor and with striking emphasis in the general conviction that there must be unity and continuous
production until victory is won. The universal sentiment seems to be summed up in The Union Labor News of Santa Barbara, California, which proclaims in a front-page editorial: "The American labor scene changed as quickly over the weekend as did civilian and military life."

The Wisconsin Teamster saw the Axis as a dragon:

With the explosion of the first bomb at Pearl Harbor, all minor irritations and differences of opinion in America were blasted out of existence. This is a war to preserve the freedom and advances which labor has so painfully helped to achieve. Labor must now, more painfully and more determinedly than ever, protect its advances and that freedom by devoting itself completely to the primary task at hand—the destruction of the three-headed dragon of Germany, Italy, and Japan.

The Anthracite News said:

One single purpose, above all others, now inspires the members of the CIO, along with all true Americans. It is to win victory over Hitler and his Axis partners who have attacked our country because it stood in the way of their drive for world conquest and the enslavement of the human race. The United Mine Workers of America stands ready to do everything in its power to aid the Government in the prosecution of the war * * * to a successful victory and ultimate peace. This is in the tradition of the "greatest union in the world." It has been said that the United Mine Workers * * * contributed more in men and in other services toward winning the first World War than any other organization in the Nation. That record undoubtedly will be equalled and maybe surpassed in this emergency.

"We must raise our sights all along the production line. Let no man say it cannot be done. It must be done—and we have undertaken to do it."*
3. MANPOWER

The Action Program of Labor Supply and Training

Nearly seven million men and women were mobilized in 18 months to make and use the tools and run the machines for war production.

Great demands for qualified workers in production of planes, tanks, ships, guns, ammunition, and the other war necessities were anticipated and met by the War Production Board in cooperation with management and labor groups and other Government agencies.

After December 7, 1941, the onset of war trebled our need for production of war equipment and for war workers.

More Workers, More Production

The WPB Labor Division, working with labor unions, management, and other Government agencies, had already taken steps to provide at least 3,000,000 new production workers in 1942, plus 1 or 2 million to replace those called to serve in the armed forces.

Now it became necessary instead to recruit, train, and employ at least 10 million workers this year, to bring our war production force to 16 or 17 million.

It is estimated that maximum war production, to be reached during 1943, may require 20,000,000 men and women.

About 9,000,000 were employed as of April 1, an increase of more than 2,000,000 in 3 months.

(War employment includes all manufacturing on war contracts, lend-lease and foreign purchases, and a percentage of transportation, public utilities, and other industries directly chargeable to the war effort.)

The labor force also is being drawn upon by the armed forces for probably 2,500,000 men in 1942, in addition to 2,000,000 during 1941.

During 1942, it has been estimated, the net additional war
requirements of manpower (9,700,000 for war industry and about 2,500,000 for the armed forces) will come from the following sources:

1. Nonwar civilian industries ............... 7,900,000
2. Farms ....................................... 400,000
3. Self-employed (professional, etc.) .... 400,000
4. Unemployed ................................. 1,500,000
5. Housewives, youth, older workers, and others not listed as in the industrial labor market ............... 2,000,000

**Total .................................... 12,200,000**

**The War Manpower Commission**

The direction of this program was given by the President on April 18, 1942, to Paul V. McNutt, Administrator of the Federal Security Agency, who was made Chairman of a new War Manpower Commission set up by Executive Order as a part of the Office for Emergency Management. The Chairman was directed to bring about "the most effective mobilization and the maximum use of the Nation's manpower in the prosecution of the war." He was given power to issue directives to all Government agencies whose functions relate to labor supply and training. These and other powers were to be exercised by the Chairman after consultation with other members of the Commission.

McNutt announced at once that the Commission would operate by "voluntary and democratic" methods.

The Commission consists of the Federal Security Administrator as Chairman, and a representative of each of the following departments and agencies:

The Department of War.
Department of the Navy.
Department of Agriculture.
Department of Labor.
War Production Board.
Labor Production Division of WPB.
Selective Service System.
United States Civil Service Commission.

The former Labor Division's functions in directing labor training and the Labor Department's Apprenticeship Section were transferred to the Federal Security Agency. Labor supply functions of the Labor Division were given to the new War Manpower Commission.

A new Labor Production Division was created in the War Production Board as a reorganization of the former Labor Division, with the function of bringing to the WPB Chairman "information and recommendations relating to the actual production problems in which labor is primarily concerned."

The President in his first war broadcast December 9 announced a decision to "speed up all existing production by working on a 7-day-week basis in every war industry, including the production of essential raw materials," and to add to production capacity by building new plants and converting existing plants, large and small, to war needs.

On December 11, unions of the American Federation of Labor and the Congress of Industrial Organizations were called upon by Sidney Hillman, then head of the war labor program, to accept immediate 7-day-week operation for war work, negotiating necessary contract changes later by collective bargaining, and, if necessary, using arbitration to settle any disputed points. Most war production plants were already working 2 or 3 shifts daily.

More Training

Hillman called on public vocational schools to expand their courses so that all their shop and training machinery will be used on a 24-hour-day and 7-day-week basis. "The outbreak of war makes it as imperative to use our training machinery to the utmost as to use our production machinery full time," he said. More than 600 such schools were already working around the clock.
The Labor Division, working with organized labor, Government agencies, and business management, surveyed present and future war labor requirements, determined policy on standards of work and training, assisted in preventing and adjusting labor-management disputes which might retard production, and advised with other war agencies on all matters affecting labor. Its actions were based on the President's policy of voluntary cooperation and the maintenance of social gains.

First step, in June 1940, was the formation of a committee of 16 leading trade-union officials to consult on policy. Many labor-union leaders were enlisted to staff the Labor Division. Unions were brought into the administration as well as the planning of the defense program.

Another early step was an inventory of workers available for defense jobs and defense training in every area of the Nation. The United States Employment Service, at the Labor Division's request, undertook this task through the 1,500 public employment offices. With the cooperation of the Civil Service Commission, the Social Security Board, and the WPA, and with the help of surveys made by unions of their memberships, more than 6,000,000 workers were registered. War industries have thus been able to recruit manpower quickly.

**Training Vital to Defense**

From the start of the defense program in June 1940, a program of defense training was adopted and carried out through existing agencies and with the cooperation of local schools, public officials, management and labor groups, the WPA, NYA, and CCC, under the Labor Division Defense Training Branch.

As a result, when war broke out, training programs, financed by the Federal government, were being conducted by public education authorities in every state for the development of qualified workers for war industries.

A total of 3,457,585 persons received instruction through these programs from their inception on July 1, 1940 to April 1,
1942. One thousand public vocational and trade schools, 155 colleges and universities, and 10,000 public-school shops assisted in the programs.

**Training Within Industry**

Development of in-plant training and upgrading was undertaken by a Training Within Industry Branch of the Labor Division. This Branch, working through training specialists borrowed from factory management, and aided by labor and management advisers, consults with war contractors, providing assistance and advice in setting up programs of training, upgrading, and instruction of foremen and lead men. More than 3,000,000 workers in war contract factories received in-plant training from employers through arrangements made by this Branch.

By application of training-within-industry techniques, more than 40,000 lead men, foremen, and supervisors have been trained to pass on their know-how to new workers in 1,679 war plants with a total employment of 2,120,000 people. This job instructor program reaches supervisory personnel at the rate of 8,000 a week and is reaching more contractors every day. It is estimated that each of these 40,000 new supervisors will train at least 10 war workers in the plant, right on the job.

Progress has been made toward utilization of neglected labor supplies, particularly Negroes. The President's Executive Order 8802, forbidding discrimination in war training and employment because of race, creed, color, or national origin, set up a Committee on Fair Employment Practice to investigate and act against such discriminations. The order also required all war contracts to contain a clause pledging the contractor against such discriminations. Many employers and unions have been persuaded to employ qualified Negroes in skilled and semiskilled occupations hitherto barred to them.

Women are being hired in increasing numbers, chiefly in the airplane industry.
The NYA and CCC programs also have provided training and work experience to hundreds of thousands of young workers. The NYA has 71,077 now enrolled in its Youth Work Defense Program, in addition to 153,581 participating in regular NYA work projects tied into war production, and 1,086,000 who received practical experience and training during the calendar year ended December 31, 1941.

**Training for Farm Workers**

The war’s food demands probably will require an expansion of training for farm workers during 1942. Under the current program financed by Congress, training in farm operations, with special emphasis on mechanized tools, is being conducted in school shops in 2,500 rural communities. During the past year 349,700 youths have been enrolled in this program, and 46,080 are now taking these courses. These courses train farm boys so that they may be useful in industrial production, as well as more efficient in agricultural work.

The engineering, science, and management defense training courses in the engineering schools of colleges and universities are particularly important in view of the great need for technical and supervisory personnel in defense industries. A total of 220,000 attended these courses in 1941, and 83,000 were enrolled on December 1.

**Two Kinds of Training**

Vocational training courses for defense workers are on two levels, first, supplementary courses to upgrade employed workers, and second, preemployment training for unemployed workers.

"Speed will count. Lost ground can always be regained—lost time never. Speed will save lives; speed will save this nation which is in peril; speed will save our freedom and civilization—and slowness has never been an American characteristic."

—
The supplementary courses, correlated with the Training Within Industry Program, have increased from the first month's enrollment of 25,000 to a March 1942 enrollment of 175,680. During the 21 months this program has operated, 1,126,267 have been enrolled. It was planned to train 900,000 in 1942 in these supplementary courses, but the war calls for expansion far beyond this figure.

Preemployment training emphasizes the types of work most needed for war production and is designed to develop "production workers"—semiskilled or single-skill workers and replacements for more experienced men who are upgraded to foremen or supervisors. Training is given for a specific job in a specific industry. During the 21 months of this program, 1,066,105 have been enrolled and 176,866 were taking such courses on March 31. Included in this number were 169,716 WPA workers, 116,644 of whom have voluntarily left WPA to accept employment.

"We Must Do More"

Meanwhile, the war effort increased total industrial employment to an all-time high, surpassing the 1929 peak by 4 million persons. In November 1941 there were 40,693,000 at work in war and civilian industries.

Eager cooperation by the Nation's workers has completed ships, factories, and thousands of defense projects far ahead of schedule.

United States entry into the war junked all previous schedules and gave a new definition to "all-out production."

A general shortage of supervisory personnel developed in the war industries along with shortages of skilled workers in certain crafts and occupations. Seven-day-week operation of these plants further increased the shortages.

"We must not underrate the enemy."
Four principal lines of action were urged on the Nation.

1. There must be full utilization of local labor before workers are recruited outside the community.

2. Artificial barriers to employment must be broken down in order to utilize all qualified workers regardless of age, sex, color, or ancestry.

3. Training programs must be expanded within industry and outside of industry to increase the skill of employed workmen and develop initial skill in untrained, unemployed workmen.

4. Conversion of civilian industry to war production must be speeded up.

If these measures fail, steps must be taken to effect transfer of skilled workmen from civilian to war industries.

"We must guard against divisions among ourselves and among the other United Nations. We must be particularly vigilant against racial discrimination in any of its ugly forms."
4. GROUNDWORK FOR ALL-OUT PRODUCTION

Progress Through Master Agreements

America entered the war with worker-employer relationships stabilized to a high degree, particularly in the basic and war industries.

Broad expansion of labor organizations and contractual relationships during the previous 8 years, under the orderly procedures of collective bargaining, had helped to build a national structure of improved wage standards and stable working conditions contributing greatly to rapid and effective expansion of war production.

Shipbuilding "Stabilized"

During the "defense period" (June 1940–December 1941) a great step was made toward orderly production and expansion in shipbuilding through uniform "zone standards" covering wages and working conditions and forbidding all stoppages. These were drafted in joint conferences of labor, management, and Government, and made effective by incorporation into collective bargaining agreements. They have cut down "raiding" by employers in rival shipyards, and have prevented chaotic spiraling of wage rates.

In conformity with the President's seven-point anti-inflation program, the unions in conference with managements and Government officials in May agreed to accept shipyard wage increases smaller than these zone standard agreements called for, under an agreement whereby all wage increases will be paid in War Bonds and Stamps.

The Labor Division also helped develop a nationwide agreement between the defense construction agencies and the AFL building trades unions which regularized working conditions and overtime wages, in addition to foregoing strikes, on all defense construction.
The international unions have given excellent cooperation in carrying out these agreements.

Chaotic employment conditions which might occur in a rapid shift to wartime industry and to war economy should be circumvented as a result of the worker-management contractual relationships which now exist in iron and steel, automobile, coal, and other basic industries. In these industries, wages, working conditions, and seniority are safeguarded by union contracts.

In the automobile and rubber industries, unions and management, with the Labor Division, have worked out standards which will govern and permit the transfer of workers to war industry jobs, safeguarding their rights and hastening the transfer process to expedite the war effort.

A high level of wages, with generally uniform provisions covering working conditions, has been developed in the rapidly growing aviation industry with the assistance of the Government's conciliation and mediation machinery, without the loss of important time in strikes and stoppages.

In recent years, management and labor have established national or regional contractual relationships, with few or no stoppages, in the railroad, maritime, longshore, pottery, foundry, trucking, and glass industries.

**All Out for Victory**

A few days after the Japanese assault on Hawaii, labor and management in the maritime industry met with the Maritime Commission and agreed upon a program forbidding wartime strikes and lock-outs, providing for a special board to settle disputes, and setting up a uniform system of bonuses and insurance. The Commission reported that this action completely stabilizes the industry for the duration of the war, with the preservation of the sailors' rights of collective bargaining and the recognition of all existing agreements and obligations.
5. AN END TO STRIKES

No Picket Lines on War Work

Rapid solution of all outstanding labor disputes, and elimination of major stoppages caused by strikes, marked the first weeks of America’s active participation in the war.

During December 1941, according to Labor Division reports, there were only 8 stoppages in war industries, involving 3,800 workers and resulting in 9,800 man-days of idleness. Only 2 of the strikes started after war was declared on December 8, and at the end of December there were no strikes of significance to war production.

In December stoppages were one-third as many as in November, with one-third as many workers affected, and they lost less than one-eleventh of the time lost in November.

After December 8, response to the all-out production need was indicated by settlement of 29 threatened strikes, covering 35,000 workers, with the assistance of various governmental agencies. Two defense strikes were ended by mutual agreement on December 8, the day Congress declared war on Japan.

New Lows in Strikes

The weekly trend in significant defense stoppages is shown in these figures:

¹ Figures overlap.
Government conciliation and mediation machinery for peaceful settlement of grievances and disputes was increased at the start of the defense effort in June of 1940, and has functioned steadily since to prevent interruptions of production.

The records of the Labor Division list 583 cases, involving 2,168,400 workers in plants having Army, Navy, and Maritime Commission contracts, in which threatened strikes were settled without any work stoppages from June 1, 1940, to December 15, 1941.

 Strikes of primary importance to defense production, from June of 1940 to November 1, 1941, numbered 143, involving 259,000 workers who lost 2,556,514 man-days of work.

The National Defense Mediation Board, established in March of 1941, tackled the more serious cases after conciliation efforts had failed. In 112 cases up to the end of December, involving more than 1,000,000 employees, work was continued or resumed while the Board was deciding the merits of the disputes.

On January 12, 1942, the President acted on the unanimous three-point agreement reached by the management-labor conference December 23 that there would be no strikes or lock-outs, that all disputes would be settled by peaceful means, and that the President should set up a War Labor Board to handle these disputes. On that date he established by Executive Order the National War Labor Board composed of 12 members—four representing labor (two CIO, two AFL), four management, and four representing the general public. To this Board he gave the power to “finally determine” all

“We cannot wage this war in a defensive spirit. As our power and our resources are fully mobilized, we shall carry the attack against the enemy—we shall hit him and hit him again wherever and whenever we can reach him.”

—
controversies "which might interrupt work which contributes to the effective prosecution of the war."

The Executive Order provides the following steps for settling controversies:

1. The parties shall first resort to direct negotiations or to the procedures provided in a collective bargaining agreement.

2. If not settled in this manner, the Commissioners of Conciliation of the Department of Labor shall be notified if they have not already intervened in the dispute.

3. If not promptly settled by conciliation, the Secretary of Labor shall certify the dispute to the Board, provided, however, that the Board in its discretion after consultation with the Secretary may take jurisdiction of the dispute in its own motion. After it takes jurisdiction, the Board shall finally determine the dispute, and for this purpose may use mediation, voluntary arbitration, or arbitration under rules established by the Board.

This agreement and the new machinery is functioning efficiently under war conditions. Chairman W. H. Davis, of the War Labor Board, reported that time lost through strikes on war production during the first 3 months of 1942 was 6/100 of 1 percent of the total war employment.

During January, February, and March there were 160 war industry strikes, involving 71,000 workers, who lost approximately 332,000 man-days of work. Total employment on war production in this period was 552,000,000 man-days.

"We know that we may have to pay a heavy price for freedom. We will pay this price with a will. Whatever the price, it is a thousand times worth it."

6. THE LESSON OF WAKE ISLAND

You have read the magnificent story of the marines on Wake Island. You know what they did with four airplanes. Suppose that during the last 18 months we, the comfortable stay-at-home American people, had given that extra bit of self-denial and made that extra effort by which those marines could have had fifty airplanes instead of four, don't you imagine the story today would be a little different? Different? Why, those boys would probably be in Tokyo by now—as conquerors, not as prisoners of war.

Keep that Wake Island story in mind every day from now on. Use it as your measuring stick. There will be many more battles before this war is won; would you care to be in the position, when those battles are fought, of having kept our fighting men from having one bit of sorely needed equipment? Of course you wouldn't; you would go and hang yourself rather than accept such a responsibility. Yet every single part of this gigantic effort to swing over into full war production has its own Wake Island somewhere in the background. Every time this Nation has to make up its mind about some problem of industrial conversion, of expansion of production of raw materials, of any other phase of this tremendous effort—every time that we have such a decision to make, we are handling the sacred lives of a certain number of unknown American soldiers.

Every time we lack the imagination to use machinery to the best advantage, we are prolonging the war, with all its toll of death and suffering. Every day that we waste arguing over how a needed job is going to be done increases the

"We are inspired by a faith which goes back through all the years to the first chapter of the book of Genesis: 'God created man in his own image.'" **

23
chances that some other gallant group of boys is going to have to go into action backed by 4 airplanes instead of 50.

Do we let a ton of copper stay in the ground when we might have got it out by using a little ingenuity? Then we diminish our own chances for victory.

Do we accept 50-percent conversion of an industry’s tools to defense production when we might possibly have had 70 percent if we had insisted on taking nothing less? Then we send some of our boys into action with the odds against them.

Do we fail to make use of scattered machines in small shops, because our imagination isn’t up to the task of finding a way to spread war production out into the nooks and crannies of our industrial structure? Then we have blundered to precisely the same effect as the general who unwisely sends troops out to attack a stronger foe.

That is the kind of compulsion we are under from here on in. And when I say “we,” I mean all of us—ordinary citizens back home and Government officials in Washington alike. Every one of us must see clearly that there is one big job today and that everything else is second to it.

We must get and hold the point of view which sees no necessary accomplishment as impossible, which looks on obstacles only as things which are to be knocked out of the way, and which is ready to try any new routine, any new device, any new way of doing things, in order to get results.

Chairman, War Production Board.

“Only total victory can reward the champions of tolerance, and decency, and freedom, and faith.”

24
“Our task is hard—our task is unprecedented—and the time is short. We must strain every existing armament-producing facility to the utmost. We must convert every available plant and tool to war production. That goes all the way from the greatest plants to the smallest—from the huge automobile industry to the village machine shop.

Production for war is based on men and women—the human hands and brains which collectively we call Labor. Our workers stand ready to work long hours; to turn out more in a day’s work; to keep the wheels turning and the fires burning twenty-four hours a day and seven days a week. They realize well that on the speed and efficiency of their work depend the lives of their sons and their brothers on the fighting fronts.”
